Code and model: https://github.com/HengLan/TA-STVG

# What is Spatio-Temporal Video Grounding (STVG)?

☐ STVG aims to localize the object of interest in an untrimmed video with a spatio-temporal tube given a free-form textual query

Input text query: What does the adult ride in the playground? Output spatio-temporal tube from an untrimmed video:

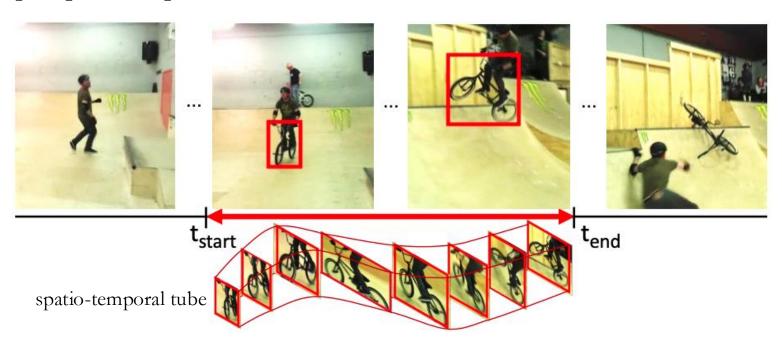

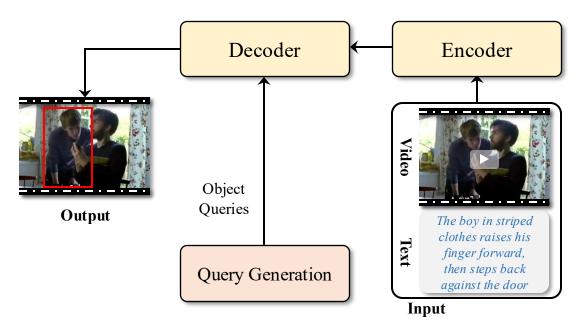

Image courtesy Yang et al, CVPR'2022

## **Existing Transformer-based STVG Methods**

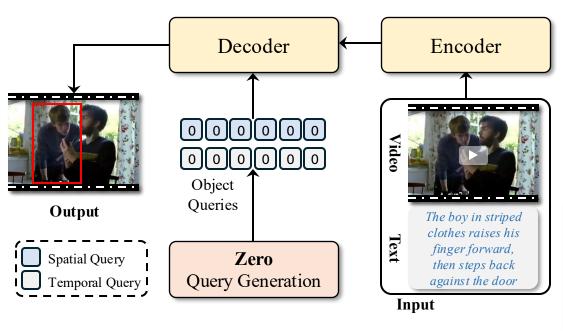

□ Current Transformer-based STVG methods [Yang et al, CVPR'2022; Jin et al, NeurIPS'2022, Gu, et al, CVPR' 2024, etc] inspired by the DETR [Carion et al, ECCV, 2020]

- Multimodal Encoder
  - visual and textual feature fusion
- o Decoder:
  - learning target position in queries from video and text

## **Existing Transformer-based STVG Methods**

□ Current Transformer-based STVG methods [Yang et al, CVPR'2022; Jin et al, NeurIPS'2022, Gu, et al, CVPR' 2024, etc] inspired by the DETR [Carion et al, ECCV, 2020]

#### Zero query generation:

 Current STVG methods simply utilize zeros to initialize queries

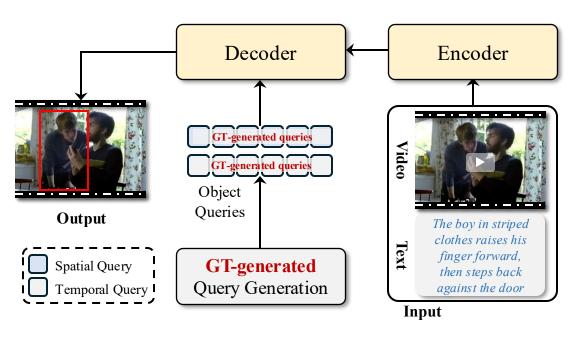

#### Problem:

 Zero-queries are difficult to learn discriminative target position information in complicated scenarios due lacking effective target-specific semantic cues

- o Multimodal Encoder
  - visual and textual feature fusion
- o Decoder:
  - learning target position in queries from video and text

- ☐ Target-specific cues as a prior to guide object query learning
  - o If object queries know the target from the very beginning, i.e., they know what to learn, they can better interact with the multimodal features for more accurate localization.

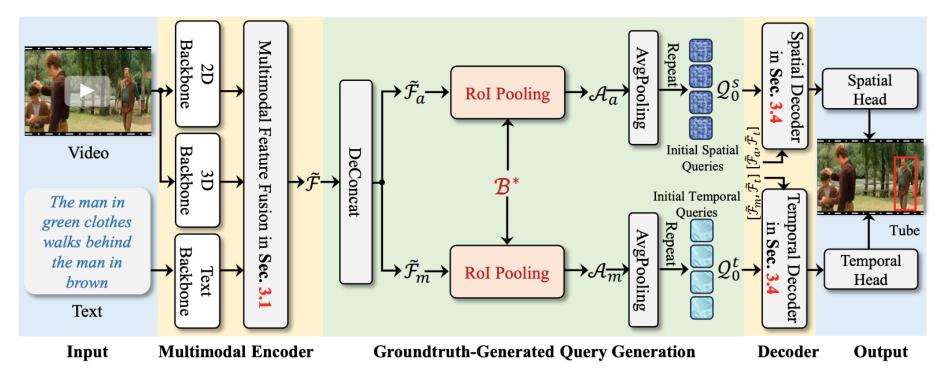

#### GT-generated queries:

Apply groundtruth (GT) to initialize queries

- Multimodal Encoder
  - visual and textual feature fusion
- o Decoder:
  - learning target position in queries from video and text

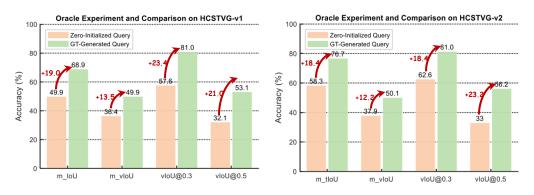

- ☐ Oracle Experiments
  - o Apply groundtruth-generated object queries for STVG.

 $<sup>\</sup>mathcal{B}^*$  groundtruth bounding box used to generate object queries

#### ☐ Oracle Experiments

o Comparison of performance using zero-initialized object queries and groundtruthgenerated object queries for STVG on three popular benchmarks

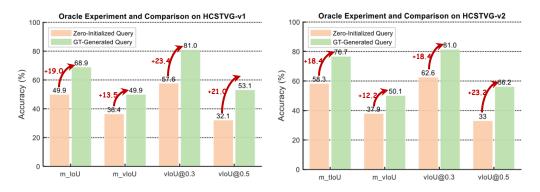

#### Oracle Experiment and Comparison on VidSTG 100 Zero-Initialized Query GT-Generated Query 80 Accuracy (%) 54.2 48.6 45.1 +13.1 31.6 27.5 20 m\_loU (D) vloU@0.3 (D) vloU@0.5 (D) m\_vloU(I) vloU@0.3 (I) m\_vloU (D) m\_loU (I) vloU@0.5 (I)

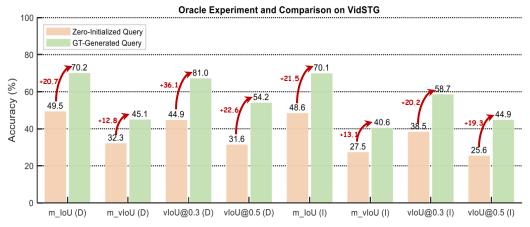

#### Observation:

 Introduction of target-specific information from groundtruth to initialize object queries significantly improves STVG performance.

#### ☐ Oracle Experiments

o Comparison of performance using zero-initialized object queries and groundtruthgenerated object queries for STVG on three popular benchmarks

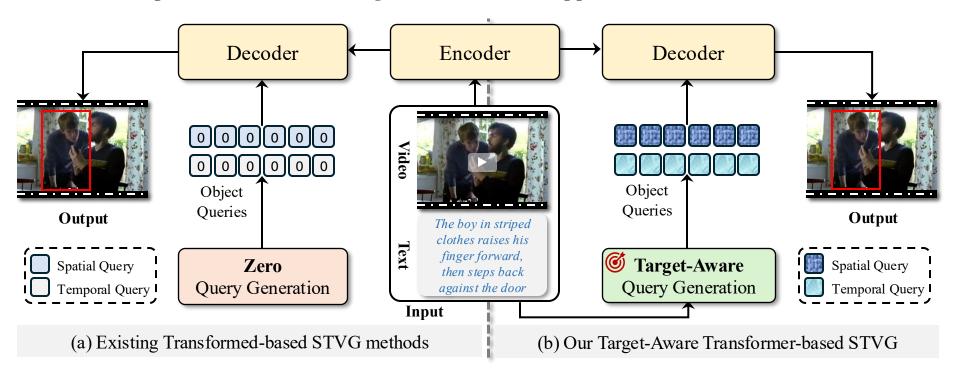

#### Observation:

 Introduction of target-specific information from groundtruth to initialize object queries significantly improves STVG performance.

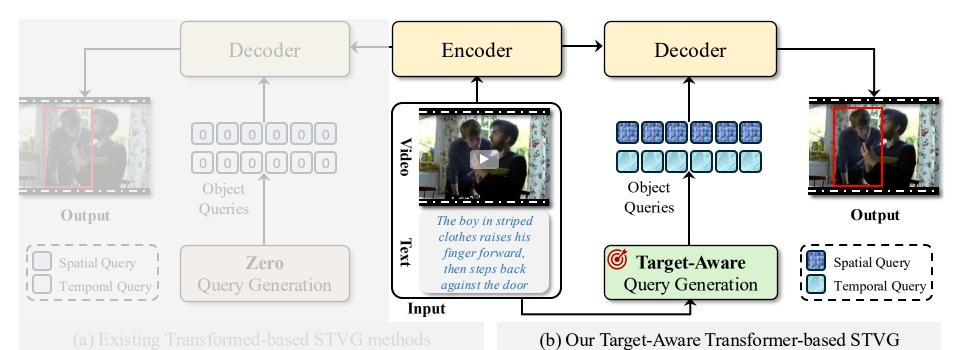

#### **Motivation**:

 Exploring target-cues from the video to initialize the object queries in Transformer-based STVG

- ☐ The proposed Target-Aware Transformer-based STVG generating queries with target-aware cues from video and text for STVG
  - O Comparison between existing methods and our approach

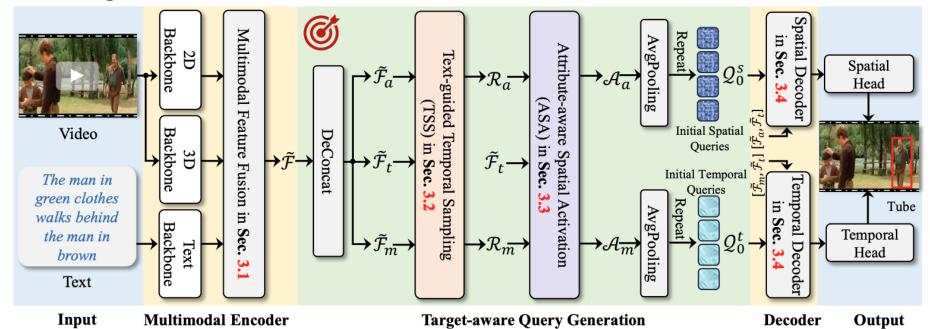

- ☐ The proposed Target-Aware Transformer-based STVG generating queries with target-aware cues from video and text for STVG
  - o Comparison between existing methods and our approach

#### Core:

- learning target-aware queries directly from the given video-text pair
- Queries naturally carrying target-specific cues

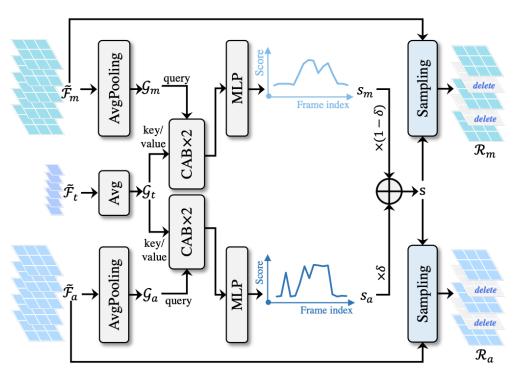

☐ The proposed Target-Aware Transformer-based STVG generating queries with target-aware cues from video and text for STVG

Overview of TA-STVG, which exploits target-specific information for STVG.

- o Multimodal Encoder: visual and textual feature fusion
- o Target-aware Query Generation: learning object queries from the video
  - Text-guided Temporal Sampling (TTS)
  - Attribute-aware Spatial Activation (ASA)
- o Decoder: learning target position in queries from video and text

☐ Text-guided Temporal Sampling (TTS)

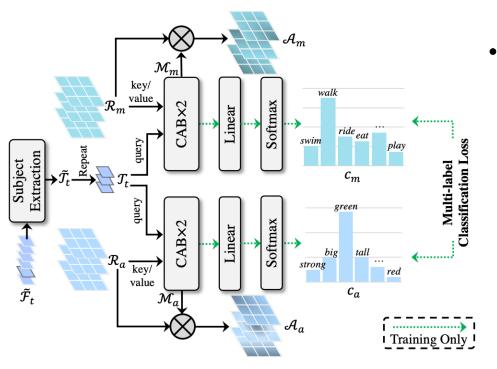

- Identify and sample frames relevant to the target guided by holistic textual features
  - Consider both motion and appearance information
  - Predict relevance scores for each frame
  - Predict sampled targetrelevant temporal appearance and motion features

o Analysis of TTS

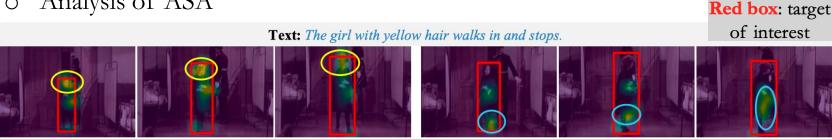

Attribute-aware Spatial Activation (ASA)

- Mine fine-grained visual semantic information
  - Consider both motion and appearance attribute
  - Use attention maps as attributespecific spatial activation
  - Learn the target-specific attribute features

(b) Appearance ("yellow") activation  $\mathcal{M}_a$  by ASA

(c) Motion ("walks" and "stops") activation  $\mathcal{M}_m$  by ASA

☐ Comparison of attention maps for zero-initialized and our target-aware object queries in video frames in the spatial decoder

**Text:** The man in green clothes walks behind the man in brown.

Attention maps of **zero-initialization** queries

Attention maps of our target-aware queries

**Text:** The girl in pink clothes moves to the man and hugs the man.

Attention maps of zero-initialization queries

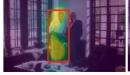

Attention maps of our target-aware queries

**Text:** The man in the white shirt puts his wine bottle on the table.

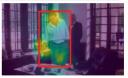

Attention maps of zero-initialization queries

Attention maps of our target-aware queries

Target-queries focus better on target regions, which benefits target localization!

Red box: target of interest

☐ Experiments – State-of-the-art Comparison

Table 1: Comparison on HCSTVG-v1 (%).

Table 2: Comparison on HCSTVG-v2 (%).

- Experiments Validation of Generality
  - O Apply our TTS and ASA modules on two popular frameworks, including TubeDETR [Yang et al, CVPR'2022] and STCAT [Jin et al, NeurIPS'2022]

Table 10: Incorporate the TTS and ASA modules into different methods on HCSTVG-v1 (%). ♦: results from the original paper. ♦: retrained results.

| Method                      | TTS + ASA    | m_tIoU             | m_vIoU             | vIoU@0.3           | vIoU@0.5           |
|-----------------------------|--------------|--------------------|--------------------|--------------------|--------------------|
| <b>1</b> TubeDETR ♦         | _            | 43.7               | 32.4               | 49.8               | 23.5               |
| <b>②</b> TubeDETR           | _            | 43.2               | 31.6               | 49.1               | 25.5               |
| ❸ TubeDETR                  | $\checkmark$ | <b>45.5</b> (+2.3) | <b>33.5</b> (+1.9) | <b>53.0</b> (+3.9) | <b>27.1</b> (+1.6) |
| <b>4</b> STCAT <sup>♦</sup> | -            | 49.4               | 35.1               | 57.7               | 30.1               |
| <b>⑤</b> STCAT <sup>♦</sup> | -            | 48.3               | 34.9               | 57.2               | 29.8               |
| <b>6</b> STCAT ◆            | $\checkmark$ | <b>50.0</b> (+1.7) | <b>36.7</b> (+1.8) | <b>59.9</b> (+2.7) | <b>31.7</b> (+1.9) |

#### Observation:

 TTS and ASA are general and applicable to other methods for improvements

☐ Experiments – Demos

**Text:** The woman goes to the man and talks to him.

Red box: our results; Green box: groundtruth. **Text:** The man turns around and points to the woman in the blue skirt, and takes a few steps to stop.

# Knowing Your Target **©**: Target-Aware Transformer Makes Better Spatio-Temporal Video Grounding
